**Abstract of DE19620681**

The tape (10) connects releasably to itself or other tape with the aid of hooks (12) and pressed into its own fleece (14) or that of a second tape, tearing the tape off itself etc for release. The hooks are arranged in an area enclosed by the fleece and they should be higher than the fleece on a tape made from knitted material. The tape may be made on a double-rib loom and the protruding hooks are distributed all over the tape, using monofilament thread to make the hooks so they do not stretch but remain in hook shape. The tape is simply folded over for joining to itself, pressing home until pulled apart in release.
